INSTRUCTIONS FOR USE: Company Medical Policies serve as guidance for the administration of plan benefits. Medical policies do not constitute medical advice nor a guarantee of coverage. Company Medical Policies are reviewed annually and are based upon published, peer-reviewed scientific evidence and evidence-based clinical practice guidelines that are available as of the last policy update. The Company reserves the right to determine the application of medical policies and make revisions to medical policies at any time. The scope and availability of all plan benefits are determined in accordance with the applicable coverage agreement. Any conflict or variance between the terms of the coverage agreement and Company Medical Policy will be resolved in favor of the coverage agreement. Coverage decisions are made on the basis of individualized determinations of medical necessity and the experimental or investigational character of the treatment in the individual case. In cases where medical necessity is not established by policy for specific treatment modalities, evidence not previously considered regarding the efficacy of the modality that is presented shall be given consideration to determine if the policy represents current standards of care.

SCOPE: Providence Health Plan, Providence Health Assurance, and Providence Plan Partners as applicable (referred to individually as “Company” and collectively as “Companies”).

PLAN PRODUCT AND BENEFIT APPLICATION

Commercial

Medicaid/OHP*

Medicare**

*Medicaid/OHP Members

Oregon: Services requested for Oregon Health Plan (OHP) members follow the OHP Prioritized List and Oregon Administrative Rules (OARs) as the primary resource for coverage determinations. Medical policy criteria below may be applied when there are no criteria available in the OARs and the OHP Prioritized List.

**Medicare Members

This Company policy may be applied to Medicare Plan members only when directed by a separate Medicare policy. Note that investigational services are considered “**not medically necessary**” for Medicare members.

COVERAGE CRITERIA

Spine Indications

- I. Continuous intraoperative neurophysiological monitoring (CPT code: 95940; HCPCS code: G0453) using sensory evoked potentials, motor evoked potentials, electromyography or electroencephalography may be considered **medically necessary** when there is significant risk of nerve or spinal cord injury for any of the following (A.-D.):
 - A. Repeat spinal surgery with instrumentation;
 - B. Surgery for significant spinal stenosis with myelopathy (see [Policy Guidelines](#) for full definition);
 - C. Surgical instrumentation for correction of scoliosis or significant congenital, traumatic or degenerative spinal deformity;
 - D. High-risk cervical spine surgery (e.g. vertebral or intraspinal tumor, traumatic spine/spinal cord injury including subluxation/dislocation, deformity correction, or surgery of the spinal cord).

- II. Continuous intraoperative neurophysiological monitoring (CPT code: 95940; HCPCS code: G0453) using sensory evoked potentials, motor evoked potentials, electromyography or electroencephalography is considered **not medically necessary** when criterion I. above is not met, including but not limited to when performed with any of the following procedures (A.- G.):

- A. Spine surgery in which criterion I.A-C. above are not met (e.g., initial spine surgery, routine decompression, laminotomy);
- B. Cervical spine surgery in which criterion I.D. above is not met (e.g., anterior and/or posterior cervical fusion, discectomy or laminectomy);
- C. Lumbar spine surgery performed below spinal column level L1/L2 in which criteria I.A-C. above are not met;
- D. Radiofrequency ablation;
- E. Epidural steroid injections;
- F. Facet joint injections;
- G. Spinal cord stimulator placement.

Non-Spine Indications

- III. Continuous intraoperative neurophysiological monitoring (CPT code: 95940; HCPCS code: G0453) using sensory evoked potentials, motor evoked potentials, electromyography or electroencephalography may be considered **medically necessary** for any of the following (A.-G.):
 - A. Monitoring of a cranial nerve during head and/or neck surgery (e.g., resection of skull base tumor, resection of tumor involving a cranial nerve, cavernous sinus tumor, neck dissection, epileptogenic brain tumor/tissue resection);
 - B. Monitoring of recurrent laryngeal nerve function during high-risk thyroid surgery (e.g., complete resection of a lobe of the thyroid, removal of the entire gland, malignancy, or repeat thyroid or parathyroid surgery);
 - C. Monitoring of facial nerve function during surgery (e.g., acoustic neuroma, microvascular decompression of the facial nerve for hemifacial spasm, parotid tumor resection, neurotologic/otologic procedures);
 - D. High-risk vascular surgery (e.g. surgery of the aortic arch, thoracic aorta, internal carotid endarterectomy, cerebral aneurysm, intracranial or spinal arteriovenous malformation, distal aortic procedures where there is risk of ischemia to the spinal cord);
 - E. The planned surgery poses a high risk of significant damage to an essential nervous system structure (e.g., neuroma of peripheral nerve, leg lengthening procedure when there is traction on the sciatic nerve);
 - F. The planned surgery poses a high risk of significant damage to essential brain function (e.g. surgery for intractable movement disorders, basal ganglia movement disorders, resection of brain tissue close to the primary motor cortex and requiring brain mapping.
 - G. Brachial plexus surgery.
- IV. Continuous intraoperative neurophysiological monitoring (CPT code: 95940; HCPCS code: G0453) is considered **not medically necessary** when criterion III. above is not met.

V. Continuous intraoperative neurophysiological monitoring of visual evoked potentials (VEP) is considered **not medically necessary**.

POLICY CROSS REFERENCES

None

POLICY GUIDELINES

DOCUMENTATION REQUIREMENTS

- All documentation must be maintained in the patient's medical record and available to the contractor upon request
- Every page of the medical record must be legible and include appropriate patient identification information (e.g. complete name, dates of service). The record must include the physician or non-physician practitioner responsible for providing the care of the patient.
- The patient's medical record should document the time spent in monitoring in correlation to the surgery performed.
- The submitted medical record should support the use of the selected diagnosis code(s)
- The submitted CPT/HCPCS code should describe the service performed.

DEFINITIONS

- *Myelopathy*: Myelopathy refers to any neurological deficit related to a spinal cord injury. Corresponding clinical symptoms may include, but are not limited to the following:
 - Bowel or bladder incontinence;
 - Clumsiness of the hands
 - Frequent falls
 - Urinary urgency

Corresponding objective neurological signs may include but are not limited to the following:

- Hoffman sign
 - Hyperreflexia
 - Increased tone or spasticity
- For reimbursement, monitoring must be requested by the operating surgeon with the prior authorization submission.

- Monitoring must be performed by a physician, other than any of the following: the operating surgeon, the technical/surgical assistant; or the anesthesiologist rendering the anesthesia.
- The benefits of intraoperative neurophysiologic testing are attainable under optimal recording and interpreting conditions.
- Due to the nature of these services and the potential for significant morbidity in some procedures requiring intraoperative monitoring, these services must be used in the hospital setting only. As the level of anesthesia may significantly impact the ability to interpret intraoperative studies, continuous communication between the anesthesiologist and the monitoring physician is expected when medically indicated.
- It is also expected that a specifically trained technician, preferably registered with one of the credentialing organizations will be in continuous attendance in the operating room, recording and monitoring a single surgical case, with either the physical or electronic capacity for real-time communication with the supervising neurologist or other physician trained in neurophysiology.
- Due to the potential risk for morbidity with many of the above noted surgeries and the need for explicit and focused attention to both the monitoring and the procedure, claims submitted by operating surgeons for intraoperative monitoring in addition to surgery will not be reimbursed.
- Monitoring may be performed from a remote site, as long as a trained technician will be in continuous attendance in the operating room, with either the physical or electronic capacity for real-time communication with the supervising physician (MD/DO). Technical criteria (mandatory) include that at least eight recording channels be available (16 if EEG is monitored) for all intraoperative neurophysiological monitoring. The remotely supervising physician must have the ability to watch the tracings as they are obtained in real-time in the operating room, as well as the baseline electrophysiological test and the monitoring tracings from earlier in the case.
- Technical criteria (mandatory) for remote monitoring also include (a) routine real-time auditory or written communication between the supervising physician and the operating room and (b) the capability for telephone communications as needed between the supervising physician and the monitoring technologist, operating surgeon and the anesthesiologist.
- The equipment must also provide for all of the monitoring modalities that may be applied - auditory-evoked response, electroencephalography/electrocorticography, electromyography and nerve conduction and somatosensory-evoked response.
- Undivided attention to a unique patient may be required during some surgeries, such as during response to acute events or identification of the cerebral cortex to be resected or spared from resection. The monitoring physician must have a plan in place to transfer care to another physician of any other case during those times. When paying undivided attention to a unique patient, the physician must code and bill only for that one case during those times. For other

medically necessary intraoperative neurophysiologic monitoring, a physician may monitor up to three cases simultaneously

- Reimbursement will not be provided for "incident to" care in the hospital setting. More than one patient may be monitored at once; however, claims for physician services must be submitted only for the time devoted to monitoring when attention is directed exclusively to one patient.

BACKGROUND

Intraoperative neurophysiological testing may be used to identify/prevent complications during surgery on the nervous system, its blood supply, or adjacent tissue.

Monitoring can identify new neurologic impairment; or identify separate nervous system structures (e.g. around or in a tumor); and can demonstrate which tracts of nerves are functional. Intraoperative neurophysiological testing may provide relative reassurance to the surgeon that no identifiable complication has been detected up to a certain point, allowing the surgeon to proceed further and provide a more thorough or careful surgical intervention than would have been provided in the absence of monitoring.

REGULATORY STATUS

U.S. FOOD AND DRUG ADMINISTRATION (FDA)

Approval or clearance by the Food and Drug Administration (FDA) does not in itself establish medical necessity or serve as a basis for coverage. Therefore, this section is provided for informational purposes only.

CLINICAL EVIDENCE AND LITERATURE REVIEW

EVIDENCE REVIEW

Criteria are based largely on clinical practice guidelines published through July 2023. As such, no evidence review addressing intraoperative neurophysiological testing and monitoring was conducted.

CLINICAL PRACTICE GUIDELINES

American Association of Neurological Surgeons and Congress of Neurological Surgeons

In 2018, the American Association of Neurological Surgeons (AANS) and Congress of Neurological Surgeons (CNS) updated their position statement on intraoperative neurophysiologic monitoring during routine spinal surgery.¹ Investigators recommended intraoperative neurophysiologic monitoring, as “a reliable diagnostic tool for assessment of spinal cord integrity during surgery” (Level 1 evidence). Intraoperative motor evoked potentials may also “predict recovery in traumatic cervical spinal cord

injury.” However, AANS and Congress of Neurological Surgeons found no evidence that such monitoring provides a therapeutic benefit. The statement also recommends that intraoperative neurophysiologic monitoring should be used when the operating surgeon believes it is warranted for diagnostic value, such as with “deformity correction, spinal instability, spinal cord compression, intradural spinal cord lesions, and when in proximity to peripheral nerves or roots.”

American Society of Neurophysiological Monitoring

In 2018, the American Society of Neurophysiological Monitoring (ASNM) published practice guidelines for the supervising professional on IONM.² The ASNM (2013) position statement on intraoperative MEP monitoring indicated that MEPs are an established practice option for cortical and subcortical mapping and monitoring during surgeries risking motor injury in the brain, brainstem, spinal cord or facial nerve.

North American Spine Society

In 2017, the North American Spine Society published guidelines for the use of electrophysiological monitoring for surgery of the spinal column and spinal cord.³ Investigators issued the following recommendations:

- Diagnostic: Level I
 - Multimodality intraoperative monitoring (MIOM), including somatosensory evoked potentials (SSEPs) and motor evoked potentials (MEPs) recording, during spinal cord/spinal column surgery is a reliable and valid diagnostic adjunct to assess spinal cord integrity and is recommended if utilized for this purpose.
 - MEP recordings are superior to SSEP recordings during spinal cord/spinal column surgery as diagnostic adjuncts for assessment of spinal cord integrity and are recommended if utilized for this purpose.
- Diagnostic: Level II
 - SSEP recordings during spinal cord/spinal column surgery are reliable and valid diagnostic adjuncts to describe spinal cord integrity and are recommended if utilized for this purpose.
- Therapeutic (Preventive): Level II
 - MIOM, including SSEPs and MEP recording, during spinal cord/spinal column surgery does not improve gross total tumor resection or improve neurological outcome, when utilized during intramedullary tumor resection procedures (no therapeutic benefit).
- Therapeutic (Preventive): Level III
 - There is insufficient evidence to suggest a therapeutic relationship between electrophysiological monitoring, including SSEP and MEP recordings, during spinal cord/spinal column surgery, and neurological outcome; its use is not recommended for this purpose. While intraoperative monitoring (IOM) may detect a neurological injury

during spinal surgery, its use does not result in improved neurological outcome, even when IOM alerts occur.

- While IOM may be considered to be integral to the technique for lateral approaches, there is insufficient evidence to support a recommendation for or against its use as a therapeutic adjunct with respect to a reduction in iatrogenic nerve injury and/or improvement in postoperative neurological outcome.

American Association of Neuromuscular and Electrodiagnostic Medicine

In 2017, the American Association of Neuromuscular & Electrodiagnostic Medicine (AANEM) updated their position statement on electrodiagnostic medicine.⁴ The recommendations indicated that intraoperative sensory-evoked potentials have demonstrated usefulness for monitoring of spinal cord, brainstem, and brain sensory tracts. The AANEM stated that intraoperative SEP monitoring is indicated for select spine surgeries in which there is a risk of additional nerve root or spinal cord injury. Indications for SEP monitoring may include, but are not limited to, complex, extensive, or lengthy procedures, and when mandated by hospital policy. However, intraoperative SEP monitoring may not be indicated for routine lumbar or cervical root decompression.

American Academy of Neurology

In 2012, the American Academy of Neurology concluded that the available evidence supported IONM using SSEPs or MEPs when conducted under the supervision of a clinical neurophysiologist experienced with IONM.⁵ Evidence was insufficient to evaluate IONM when conducted by technicians alone or by an automated device.

BILLING GUIDELINES AND CODING

- Per Coding Policy 89 (“Intraoperative Neurophysiology”), CPT 95941 is not covered.
- G0453 – Remote IONM Professional services per 15 min of focused attention on one patient. This does not need to be continuous. Total professional time is the sum of all focused time spent on patient. At least 8 minutes of care must have been performed in order to bill for a 15-minute interval. (i.e., Professional time of 20 minutes—bill G0453 x 1. Professional time of 23 minutes, bill G0453 x 2.)
- CPT 95937 – Neuromuscular Junction Testing is same as Train of Four (To4) testing and is a routine part of anesthesia care and is not a separately billable service.
- CPT codes for EMG (95860, 95861, 95863, 95864) should not be billed together with 95938 (SSEP) for the same episode of intraoperative monitoring.
- Please refer to [Coding Policy 89 \(“Intraoperative Neurophysiology”\)](#) for additional information.

CODES*		
<u>Note:</u>		
<ul style="list-style-type: none"> • Prior authorization for intraoperative neurophysiological testing and monitoring (CPT: 95940; HCPCS: G0453) may be required depending on the diagnosis codes billed. • Intraoperative neurophysiological testing and monitoring (CPT: 95940; HCPCS: G0453) will deny as not medically necessary when performed during lumbar surgery below spinal column level L1-L2 and/or during cervical spine surgery • Please refer to the appropriate section of the Billing Guideline Appendix linked below. 		
95940	Continuous intraoperative neurophysiology monitoring in the operating room, one on one monitoring requiring personal attendance, each 15 minutes (List separately in addition to code for primary procedure)	<ul style="list-style-type: none"> • Prior authorization is required when billed with these diagnosis codes: Appendix Link • Intraoperative monitoring is considered <u>not medically necessary</u> when billed with these diagnosis codes: Appendix Link
G0453	Continuous intraoperative neurophysiology monitoring, from outside the operating room (remote or nearby), per patient, (attention directed exclusively to one patient) each 15 minutes (list in addition to primary procedure)	
Electroencephalogram (EEG)		
95707	Electroencephalogram (EEG), without video, review of data, technical description by EEG technologist, 2-12 hours; with continuous, real-time monitoring and maintenance	
95717	Electroencephalogram (EEG), continuous recording, physician or other qualified health care professional review of recorded events, analysis of spike and seizure detection, interpretation and report, 2-12 hours of EEG recording; without video	
95812	Electroencephalogram (EEG) extended monitoring; 41-60 minutes	
95813	Electroencephalogram (EEG) extended monitoring; 61-119 minutes	
95822	Electroencephalogram (EEG); recording in coma or sleep only	
95955	Electroencephalogram (EEG) during nonintracranial surgery (eg, carotid surgery)	
95957	Digital analysis of electroencephalogram (EEG) (eg, for epileptic spike analysis)	
Somatosensory Evoked Potential (SSEP)		
95925	Short-latency somatosensory evoked potential study, stimulation of any/all peripheral nerves or skin sites, recording from the central nervous system; in upper limbs	
95926	Short-latency somatosensory evoked potential study, stimulation of any/all peripheral nerves or skin sites, recording from the central nervous system; in lower limbs	
95927	Short-latency somatosensory evoked potential study, stimulation of any/all peripheral nerves or skin sites, recording from the central nervous system; in the trunk or head	
95938	Short-latency somatosensory evoked potential study, stimulation of any/all peripheral nerves or skin sites, recording from the central nervous system; in upper and lower limbs	
Motor Evoked Potential (MEP)		
95928	Central motor evoked potential study (transcranial motor stimulation); upper limbs	
95929	Central motor evoked potential study (transcranial motor stimulation); lower limbs	
95939	Central motor evoked potential study (transcranial motor stimulation); in upper and lower limbs	

Auditory Brainstem Evoked Potential/Brainstem Auditory Evoked Potential (ABR/BAEP)	
92652	Auditory evoked potentials; for threshold estimation at multiple frequencies, with interpretation and report
92653	Auditory evoked potentials; neurodiagnostic, with interpretation and report
Peripheral Nerve Stimulation	
95885	Needle electromyography, each extremity, with related paraspinal areas, when performed, done with nerve conduction, amplitude and latency/velocity study; complete, five or more muscles studied, innervated by three or more nerves or four or more spinal levels (List separately in addition to code for primary procedure)
95886	Needle electromyography, each extremity, with related paraspinal areas, when performed, done with nerve conduction, amplitude and latency/velocity study; limited (List separately in addition to code for primary procedure)
95887	Needle electromyography, non-extremity (cranial nerve supplied or axial) muscle(s) done with nerve conduction, amplitude and latency/velocity study (List separately in addition to code for primary procedure)
95907	Nerve conduction studies; 1-2 studies
95908	Nerve conduction studies; 3-4 studies
95909	Nerve conduction studies; 5-6 studies
95910	Nerve conduction studies; 7-8 studies
95911	Nerve conduction studies; 9-10 studies
95912	Nerve conduction studies; 11-12 studies
95913	Nerve conduction studies; 13 or more studies
Oculomotor, Facial, Trigeminal and Lower Cranial Nerve Monitoring	
95867	Needle electromyography; cranial nerve supplied muscle(s), unilateral
95868	Needle electromyography; cranial nerve supplied muscles, bilateral
95933	Orbicularis oculi (blink) reflex, by electrodiagnostic testing
Free-Running Electromyography (EMG)	
51785	Needle electromyography studies (EMG) of anal or urethral sphincter, any technique
95860	Needle electromyography; 1 extremity with or without related paraspinal areas
95861	Needle electromyography; 2 extremities with or without related paraspinal areas
95863	Needle electromyography; 3 extremities with or without related paraspinal areas
95864	Needle electromyography; 4 extremities with or without related paraspinal areas
95870	Needle electromyography; limited study of muscles in 1 extremity or non-limb (axial) muscles (unilateral or bilateral), other than thoracic paraspinal, cranial nerve supplied muscles, or sphincters

***Coding Notes:**

- The above code list is provided as a courtesy and may not be all-inclusive. Inclusion or omission of a code from this policy neither implies nor guarantees reimbursement or coverage. Some codes may not require routine review for medical necessity, but they are subject to provider contracts, as well as member benefits, eligibility and potential utilization audit.
- All unlisted codes are reviewed for medical necessity, correct coding, and pricing at the claim level. If an unlisted code is submitted for non-covered services addressed in this policy then it will be **denied as not covered**. If an unlisted code is submitted for potentially covered services addressed in this policy, to avoid post-service denial, **prior authorization is recommended**.
- See the non-covered and prior authorization lists on the Company [Medical Policy, Reimbursement Policy, Pharmacy Policy and Provider Information website](#) for additional information.

- HCPCS/CPT code(s) may be subject to National Correct Coding Initiative (NCCI) procedure-to-procedure (PTP) bundling edits and daily maximum edits known as “medically unlikely edits” (MUEs) published by the Centers for Medicare and Medicaid Services (CMS). This policy does not take precedence over NCCI edits or MUEs. Please refer to the CMS website for coding guidelines and applicable code combinations.
